

# OTHER SYMPTOMS TO LOOK OUT FOR

Below are other symptoms that you can have when you take Keytruda®. We are very concerned about symptoms we have marked with a check mark. Please call the office if you develop any of these symptoms, and consider going directly to the Emergency Room if you have any of the red-flag symptoms.

✓	Symptoms	Red flags (Signs that something serious is going on that needs immediate attention)
	Appetite changes (not feeling hungry or wanting to eat)	If you have no appetite plus you feel faint, pass out, and/or have trouble thinking (cloudy thinking, confusion)
	Chest pain	Any chest pain should be evaluated immediately
	Fatigue (feeling weak or tired)	If you faint or also have shortness of breath or chest pain
	Fever	<ul style="list-style-type: none"> <li>• If you have a fever over 104.0°F</li> <li>• If you also have breathing problems</li> </ul>
	Headaches	<ul style="list-style-type: none"> <li>• If you have a very painful headache (the “worst headache of your life”), head pain that doesn’t go away after a few hours, or head pain with fever, neck pain or stiffness, and/or rash</li> <li>• If you have head pain and changes in vision</li> </ul>
	Nausea	If you have uncontrolled nausea and it is limiting your ability to eat or drink
	Shortness of breath (trouble breathing)	<ul style="list-style-type: none"> <li>• If you have any trouble breathing or worsening of your existing symptoms</li> <li>• If you have shortness of breath plus chest pain and/or fainting</li> <li>• If you have shortness of breath and swelling of the legs or leg pain</li> </ul>
